

Accident Investigation

Enables systematic, auditable inquiry following events like accidents, near-misses, outbreaks of illness and property damage.

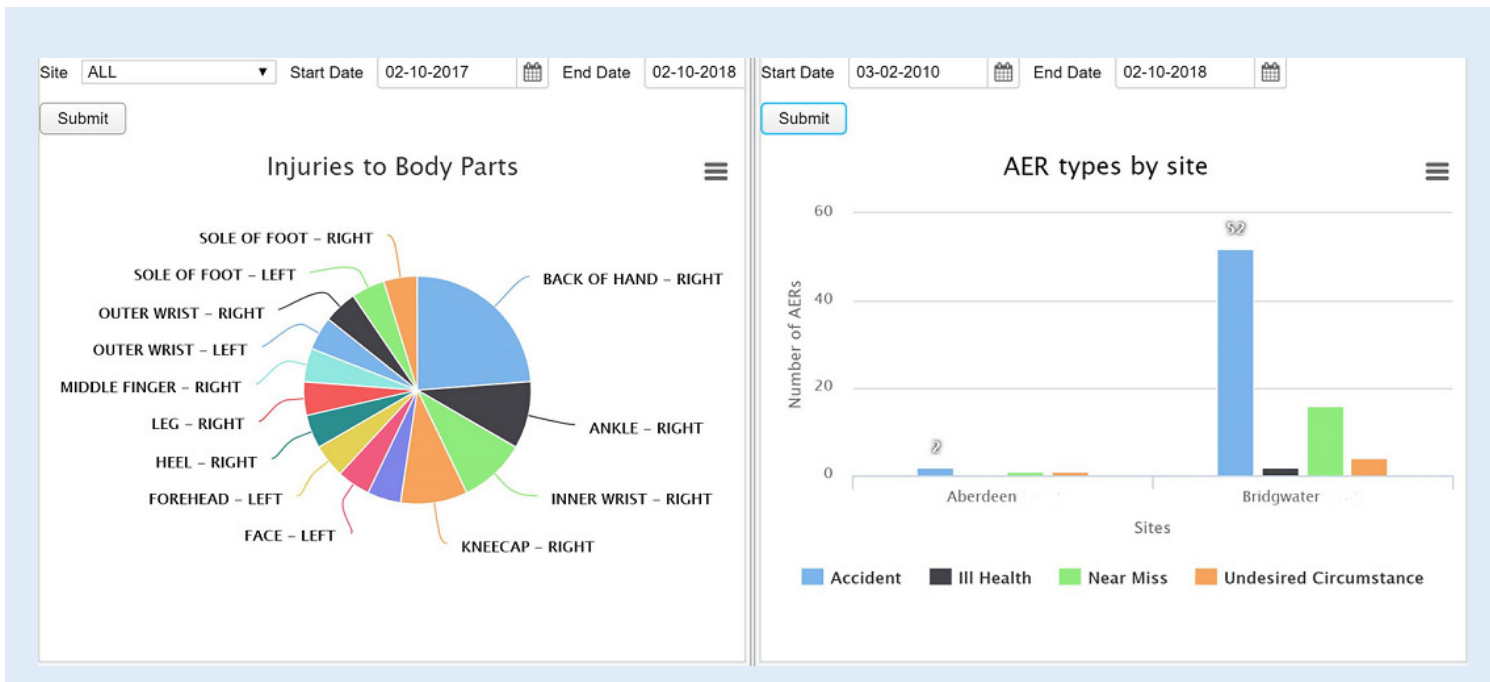

Features

- All the functionality required to carry out a post-adverse event investigation thoroughly and securely.
- All documentary evidence pertaining to each investigation can be uploaded to the library for quick retrieval.
- Summary front page for each case under investigation shows its progress and which information is still being awaited.
- Witness statements can be uploaded or created within the module and signed electronically.
- Powerful “5-Why” function enables root-cause analysis of any incident.
- Can be deployed as a standalone or linked with the EPRAIS Adverse Event Reporting module
- Action tracking functionality ensures that the investigation is followed through to completion.
- Corrective actions to prevent the same accident re-occurring are fully documented.

Benefits

- Reduced risk in the workplace through improved incident prevention
- Demonstrates your commitment to on-site worker safety
- Creates improvement culture visible to employees, insurers and customers
- Active steps in order to protect organisational reputation
- Ensures regulatory compliance
- Complete timeline history of each investigation and corrective actions for audit purposes
- Financial benefits from fewer compensation claims and reduced insurance premiums

Straightforward to use, keeping workers safe

“Using EPRAIS, we have measurably reduced our onsite accident rate. It has also proved an extremely useful resource in fulfilling our FOI obligations.”

**Paul Brindle - Engineering Manager
Lancashire Renewables**
